BIOPHARMACEUTICS & DRUG DISPOSITION

Aims and Scope

The Journal will publish original reports of studies in biopharmaceutics, drug disposition and pharmacokinetics, especially those which have a direct relation to the therapeutic use of drugs. This includes human pharmacological studies, and therapeutic response and toxicity related to plasma and tissue concentrations of drugs and their metabolites. Research on factors affecting the disposition of and clinical response to drugs, and on the design of drug dosage regimens and the treatment of overdose, based on pharmacokinetic principles, will be accepted. Papers on analytical methodology, *in vitro* drug metabolism, and on animal models will also be published, provided that either they facilitate the preceding types of investigation, or they are related to the use of drugs in man. The Journal will also publish review articles
